OBJECTIVE

Senior Backend Engineer with 5+ years of experience, seeking full-time Software Engineer roles.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer

May 2023 - Current

DevGrid

London, UK

- Developed REST APIs that efficiently processed data from over 50,000 IoT sensors, utilizing technologies such as FastAPI, RabbitMQ, and Celery workers, mainly through a Event-Driven architecture.
- Maintained Python microservices running on Kubernetes clusters, integrating and processing data from databases such as Cassandra, Redis and Postgres.
- Orchestrated GitlabCI-based CI pipelines, automating tests with libraries like Pytest and Unittests.
- Proficiently managed and processed high-volume datasets utilizing libraries such as Pandas and Numpy.

Backend Engineer

May 2022 - May 2023

DevGrid

London, UK

- Developed a REST API surfacing 100M+ Postgres database records of financial and shareholders' data using Python, Flask, and SQLAlchemy. Integrated the data provider to the client's Gateway API.
- Integrated 3rd party Know Your Customer API services according to client-used OpenAPI specification types using Pydantic library and Swagger UI.

Backend Engineer

Nov 2020 - May 2022

Eldorado Research Institute

Campinas, BR

- Designed the backend architecture of an IoT network and implemented gateway and server applications from scratch using Python, Flask, and SQLAlchemy. Ensured adherence to PEP8 standards and SonarQube tool insights through a code audit.
- Optimized deployment by transitioning on-premise Postgres and MongoDB databases to Docker containers.

IoT Researcher Engineer

Jul 2017 - Oct 2020

Unicamp University

Campinas, BR

- Engineered firmware for low-power IoT devices using C and C++ languages, targeting Nordic and STM families. Controlled peripherals like ADC and DAC, managed communication with EEPROM and flash memories via SPI and I2C interfaces.

EDUCATION

Master of IoT Engineering, Unicamp University - Campinas, Brazil

2017 - 2019

Relevant Coursework: Sensors signal acquisition and processing; Digital signal processing;

Bachelor of Electronics Engineering, Federal University of Technology - Toledo, Brazil

2013 - 2017

LEADERSHIP EXPERIENCE

Mentored a Junior Developer: Offered instruction on Clean Code and TDD principles, thereby improving the readability and maintainability of the codebase.

Taught a Basic Electronics Course for 25 Undergraduate Students: Independently developed laboratory scripts and guided students in prototyping an electrocardiogram (ECG) generator and acquisition circuit as a Teacher Assistant. Created C++ template applications for students to use in their Arduino boards.
